

We Three Witches

Important! Before starting, please make sure to (if this isn't already available from the download) create a new game resolution in the Game window:

There is a + button that lets you add a custom resolution. Name it to whatever you like (mine is "Pixel"), and set the resolution to 640 x 340.

Now, open up the Start Menu scene, and press play! You will be able to choose your character once hitting the play button. Once you hit play again, you will be transported to the level!

Objects on screen in level:

- Your health bar and mana points at the top left
- You (spawned into bottom left)
- Some platforms of the ground
- Some decoration
- Enemies (skeletons and bats) that will spawn and move toward you

Behavior:

- Player can move around, shoot, and special attack enemies
- Player health bar will decrease when hit

- Game over when player dies
- Enemy health bars decrease when hit
- Enemies will move toward player, generally
- Enemies will attack player when close to it

Controls:

- A to move left, D to move right
- Space bar or W to jump
- Left click to shoot in direction of mouse pointer
- E to use special attack

Game ends when the player dies.
